PERSONAL INFO

Hometown	Nanchang, Jiangxi
Birth	2007
Political	CPC Member
Location	Nanchang, Jiangxi

TECH STACK

Python (Advanced) · C++ · PyTorch · ROS2 · TensorRT/ONNX · Isaac Sim · MuJoCo · Vibe Coding · Diffusion Policy · VLA/PPO/SAC

CERTIFICATES

- CET-6 (580)
- National Computer Level 3 (Embedded)
- ROS Basic Certification
- MS Office (Advanced)

HONORS

- National Mathematical Modeling · Provincial First Prize
- China Robot & AI Competition · National Second Prize
- HUST "Top Graduate Student"
- National Scholarship (M.S. level)

SELF EVALUATION

• Embodied AI enthusiast with strong research & engineering background.
• Excellent team collaboration and cross-functional communication.
• Rapid prototyping with Vibe Coding mindset, balancing theory and hardware deployment.
• Follow Unitree, AgiBot, and embodied AI frontiers closely.

EDUCATION

M.S. in Computer Science — 2029 – 2032 (expected)

Huazhong University of Science and Technology (HUST)

GPA: 3.92/4.0 · Graduate with distinction

B.E. in Intelligent Science & Technology — 2025 – 2029

Wuhan University of Science and Technology (WUST)

GPA: 3.9/4.0 (Top 8%) · National Mathematical Modeling First Prize + Robotics Award

Research Focus: Embodied AI, Multimodal Perception, Sim-to-Real Transfer

INTERNSHIP EXPERIENCE

Unitree Robotics · Embodied AI Algorithm Intern — 2030.06 – 2030.12

- Participated in perception–decision–control loop for humanoid robots; fine-tuned VLA models on physical systems.
- Built Isaac Sim environments; designed Sim-to-Real strategies, improving real-world grasping success from 0% to 75%.
- Integrated 6-axis force/tactile sensors for robust manipulation; accelerated vision modules to 20Hz via TensorRT.

Huawei Noah's Ark Lab · Robotics Intern — 2029.06 – 2029.09

- Assisted in multimodal perception (image + point cloud) for dynamic robotic grasping.
- Enabled distributed training with PyTorch + DDP, improving convergence speed by 30%.

KEY PROJECTS

Diffusion Policy for Robotic Imitation Learning — 2030 – present

Python, PyTorch, MuJoCo

- Implemented Diffusion Policy to generate robot actions from human demonstrations.
- Achieved 22% relative improvement in long-horizon tasks over baseline BC methods.

VLA Model Deployment for Instruction Following — 2029 – 2030

VLM, ROS2, ONNX, TensorRT

- Fine-tuned open-source VLA model to map natural language → action sequences.
- Reduced inference latency from 150ms to 40ms via ONNX + TensorRT.

Sim-to-Real Grasping with Tactile Feedback — 2029 (Internship)

Isaac Sim, ROS2, C++/Python

- Developed domain randomization pipeline, reducing sim-to-real gap for manipulation.
- Integrated force sensors to improve stability on irregular objects.

COMPETITIONS & LEADERSHIP

- National Mathematical Modeling Contest · Provincial First Prize (2027)
- China Robot & AI Competition – Embodied AI Challenge · National Second Prize (2028)
- RoboMaster University League · Regional Top 8 (Vision Core Member)

◎ **Career Goal:** Embodied AI Algorithm Engineer — bridge cutting-edge AI models with real robots. Strong balance of research (paper reading) and engineering (PID/hardware debugging).
